

Uniaxial accelerometer

High temperature accelerometer

Type 8209A

Accelerometer Type 8209A... is designed for permanent vibration monitoring in harsh and high temperature environments and is available with different footprints.

- Permanent temperature range $-55 \dots 700 \text{ }^\circ\text{C}$
- Short time operating temperature $-55 \dots 1\,000 \text{ }^\circ\text{C}$
- Internally case isolated; differential charge output
- Frequency response up to 5 kHz ($\pm 10 \%$)
- Highest reliability
- Not pyroelectric
- ARINC triangular fixation or 25x25 hole pattern
- ATEX / IECEx certified

Description

Core of the sensor is the single crystal PiezoStar measuring element, which has a temperature capability of up to $1\,000 \text{ }^\circ\text{C}$ and is not pyroelectric. The sensor features a shear design, which significantly reduces the influence of temperature and base strain. Other features are high frequency response and a hermetic construction of the housing and a compact design.

The sensor Type 8209A... is available with two different footprints. A compact and rugged standard ARINC triangular footprint and a square footprint with 25x25 hole pattern. The sensitive axis of the sensor lies in the Z - direction.

To reach highest resolution in harsh environment, the sensor provides a differential signal output and features an internally case isolated design. The integrated hardline cable is robust, low noise and has a temperature rating of up to $1\,000 \text{ }^\circ\text{C}$. The cable is available in a standard length of 3 m as well as in customer specific lengths.

The accelerometer is ATEX / IECEx certified for applications in hazardous areas.

Application

Main applications are condition monitoring of gas turbines, structural analysis of turbomachinery and general purpose high temperature applications, which require:

- Temperature capability up to $1\,000 \text{ }^\circ\text{C}$
- Ex-certification for use in potentially explosive environment
- Integrated hardline cable
- EMI immune measuring chain
